BINANCE SMART CHAIN (BSC)

Binance Smart Chain (BSC) was created to enhance the efficiency and speed of solidity-based smart contracts compared to other blockchain networks. BSC has gained popularity in the decentralized finance (DeFi) space due to its decentralized exchanges offering fast swaps and low fees. It utilizes the BEP-20 token protocol developed by the Binance team, known for its 5-second block speeds, far surpassing others with 1-minute block speeds.

The advantages of Binance Smart Chain include its proprietary blockchain, ensuring security for users and developers. Its native dual-chain interoperability enables seamless communication and scalability for high-performance decentralized applications (dApps), delivering a fast and seamless user experience. BSC is compatible with the Ethereum Virtual Machine (EVM), supporting existing Ethereum tools while offering faster and more cost-effective transactions.

Furthermore, BSC's on-chain governance, powered by the Proof of Staked Authority (PoSA) consensus, involves 21 validators responsible for validating transactions, ensuring decentralization and fostering active community participation.

Snoopy pepe is not responsible for the actions of the Binance smart chain network.
